Hi Dawn -

I have attached the PDFs of the Tox Reports for the 4 locations sampled during Week #5 (3/5/12 - 3/8/12). These reports were sent yesterday to HQs, ATSDR and WDP. I had copied you on that e-mail - but wanted to follow-up to make sure you got the info and our request for a review. I also attached an updated summary of week 4 and 5 exceedances combined for your info. Please note that only one of the four locations sampled during week 5 had results greater than or equal to the TLs.

HW-60 had arsenic at the wellhead at 9.3 ug/L and lithium at the wellhead at 47.7 ug/L.

*Note that a lower RL (25 ug/L) for lithium was achieved for the 5th week sampling event. No tap samples were collected at this location.

I realize its short notice - but we are hoping to be ready to release the week 5 results next week along with the week 4 data. As such - I need you to complete your review and provide your findings (memos) by end of the day on Monday - April 30th. Please let me know if you think you will NOT be able to complete your review by end of Monday. Of course - let me know if you have any questions. Thanks again for your help - Kelley
